EASY First Évolution

Unbeatable quality for money.

EASY First Évolution has the advantages of a very high quality safety cover, whilst remaining affordable. It easily fits on to most pools thanks to its rectangular shape or cut-off corners.

1 Easy to use

The cover is rolled up using a hand-wheel or effortlessly using the ROLLTROT²® motor. Average operating time: unrolling = 2 mins/rolling = 3 mins.

Quick and easy to secure

Only 4 stainless steel pawls to handle the standard model.

2 Extended life

Thanks to 2 interchangeable anti-abrasion strips located under the cover in line with the coping noses and composite protective runners riveted under the tubes.

3 On-tube tension system

Obtains perfect tension of the cover.

4 Leaf-proof and anti-lifting system along the lengths

It fully protects your pool in summer or winter against dust, leaves and other impurities.

5 Cover protected from tearing

thanks to the welded reinforcements on the tube passages.

Economical solution

Less evaporation. Better thermal performances. Cleaner water. An improvement on the solar cover, with its roller and the winterisation cover.

6 Quality finish

Reinforced hem welded along the lengths.

● Anchoring eyebolt
■ Ratchet

Warning

This cover is not a substitute for common sense or personal liability. It does not aim to replace the vigilance of parents and/or responsible adults, which remains the essential factor in the protection of young children.
